

Executive Summary

I'm Keegan, a 15 year old audio engineer, hardware, and software designer. Right now, I'm building the PRISM Hybrid Vision; a modular hybrid analog-digital recording console designed to give authentic warmth of analog sound with full digital control. I already have a full spec sheet doc ready to go along with 2D CAD models, a schematic, PCB designs, and an app that I worked on last year (Groov). Existing consoles force you to choose between analog and digital; PRISM is designed to deliver both. I'm inquiring about a sponsorship so I can move from a working schematic to a working prototype. See documentation and project history at: <https://sites.google.com/view/thekvproject?usp=sharing> and <https://github.com/KeeganIsCool0/PRISMHybridVision/tree/main> .
