

Sponsor Prospectus

PRISM Hybrid Vision

PRISM is a hybrid analog-digital console with no compromises. It gives the producer analog authenticity with digital automation along with switchable styles of preamps so the studio won't need to buy more preamps.

Current Status

Schematics, 2D CAD, and documentation are now complete; now moving toward building prototype 1A.

Why Sponsor Now?

Early sponsorship provides the opportunity to support PRISM at its most influential stage; help shape the project from documentation to prototyping. Sponsors can donate to the project from the beginning while contributing minimally.

What Funding Enables

Item	Description	Est. Cost
PCB Fabrication	Machines for manufacturing PCBs fro all channels.	\$11,000
Machining	CNC machines for manufacturing the console chassis.	\$108,000
Components	Op-amps, VCA, Connectors, etc, for Prototype 1A. Subject to change.	\$5,000 (Estimate Per Channel)

Total		\$26,000
--------------	--	----------

See Bill Of Materials for more detailed analysis.

Sponsor Tiers/Benefits

Tier	Benefit	Qualification
Celebrity promotional partner	(not official, still being determined)	Requires an original public post/video from an established creator that identifies PRISM, link to the OFFICIAL project, provides commentary for the project, and remains publicly accessible for 30+ days. Final compensation is subject to a written promotional agreement before content is released.
\$100	Recognition + repository listing.	Contribute \$100 to PRISM development.
\$1,000	Prominent recognition + development access to non-confidential project materials	Contribute \$1000 to PRISM development
\$5,000	Directly supports prototype development* + everything in \$1,000 tier.	Contribute \$5,000 to PRISM development
\$10,000	Major project recognition + deeper involvement** + everything in \$5,000 tier.	Contribute \$10,000 to PRISM development
\$20,000+	Everything in \$10,000 tier + negotiated partnership.	Contribute \$20,000+ to PRISM development

About the Engineer

PRISM is designed and documented by a independent audio hardware designer. What started as a fascination with electronics has grown into building a full console, combining analog processing, digital control, automation, and immersive audio architecture. This project has progressed from concept to a project with technical documentation, and a prototype test plan completed. The next step is bringing Prototype 1A into the real world.

Contact

Please fill out the contact form at: <https://tally.so/r/wzlvW8>

*Directly funds more parts & gets logo/name on repository.

**Receives email updates & gets logo/name on console back plate.
